

McCormick-Deering No. 8 Little Genius Tractor Plows

Illust. 6. The 2-furrow No. 8 Little Genius with 14-inch general-purpose bottoms. The equipment includes the hitch handle shown below.

Rugged, Durable Plows Built for Hard Work

The Little Genius is a plow that stands up to the hardest kind of work. It will do good work under all conditions where it is reasonable to plow. Heat-treated beams and axles and rigid bracing and reinforcement wherever needed make it a plow that will hold its parts in alignment in the hardest of fall plowing.

There is great clearance between the bottoms and under the beams, giving ample room for the passage of trash, weeds, or heavy green-manure crops. There is also ample clearance between the front bottom and the front furrow wheel. You will find that the No. 8 Little Genius will do a good job of plowing and will not clog even under the most unusual conditions.

Spring Release Hitch Easy to Recouple

All Little Genius plows are equipped with a spring release hitch which automatically uncouples the plow from the tractor when the plow encounters a stone, root, or other obstacle which would otherwise damage the plow. Some users have said that this feature beats an insurance policy.

The hitch is provided with a handle, as shown in Illust. 7, so that when the plow has been released from the tractor, it is easy to back the tractor to the plow, raise the hitch,

and recouple. The plow can then either be raised to pass over the obstacle or backed far enough for the operator to remove the obstruction and proceed with the plowing without leaving a skip.

Illust. 7. This shows how easy it is to recouple the Little Genius to the tractor after the spring release hitch has operated to release the plow on striking an obstruction. All Little Genius plows are now equipped with this feature.
