## *Instructors*

**Terrill Williams**, founder of Petroleum Education Workshops is a well known speaker, instructor, author, and educator in the oil and gas industry.

**John Gensch**, founder and owner of Landstar Associates, Inc. Landstar is an esteemed professional land service company that has been engaged in serving oil and gas companies for over 30 years and John is a highly respected land professional who is valued in his knowledge of lease acquisition, negotiations, due diligence investigations and right-of-way acquisitions.

### ***Wind Energy Basics- What Every Landman and ROW Agent Should Know***

The commitment to wind energy by the US government is creating a new opportunity for tens of thousands of landmen and ROW agents. However, wind leases, option agreements and the many easements used in wind leasing are very different from those used in the oil & gas industry. Therefore, this is the perfect, hands-on, 1-day, interactive training class to learn about: 1. Wind Energy Basics; 2. An Overview of Option, Lease Easements and Lease Agreements; 3. How to Successfully Negotiate the Agreements; 4. Transmitting the power; and 5. The Benefits for landowners. This is a basic-to-intermediate level workshop that will greatly benefit all landmen, land associates, paralegals, and ROW agents.

### ***The Wind Lease/Landowner Compensation and Landowner Concerns***

The sheer length of a wind lease can be overwhelming and intimidating; the compensation packages offered to landowners can be complex; and the number of other agreements associated with leases can be confusing and exhausting. Therefore; this is the perfect 1-day, interactive training class to learn about: 1. The Clauses of the Agreements; 2. How to Calculate Compensation Packages offered to the Landowner; and 3. How to Address the Anxieties and Concerns of the Landowner. This is a basic-to-intermediate level workshop that will greatly benefit all landmen, land associates, paralegals, and ROW agents.

### ***Land Administration—the Fundamentals and Beyond***

This is the best training class available for those who are in the beginning stages of their land administration career. The workshop takes a methodical approach in laying the foundational principles of oil & gas land administration. Topics include: the body and clauses of the lease including the termination clauses, mineral, surface, and royalty ownership; GWI, NRI, Royalty, ORRI, and unit calculations; legal descriptions; farmouts, pooling, and unleased owners; plus non-consent issues and payouts in wells.

### ***Curing Land Titles - “Curing Defects in the Chain of Title”***

One of the goals of every drilling project is to successfully proceed without any major title surprises. Understanding the critical impact of curing title is priceless in achieving that goal and knowing how to cure these issues is vital for every land professional. This detailed packed workshop offers the tools necessary to “Correct the *Defects* in the Chain of Title”! This is a basic-to-intermediate level workshop and will greatly benefit attorneys, landmen, paralegals, and all land administration professionals.

### ***Critical Title Issues***

This one-day class covers crucial information for the land professional dealing with several critical title issues and conveyances that impact how oil and gas interests are calculated and maintained. Participants will look at non-participating royalty, life estates, usufructs, strangers in title, after acquired title, the Duhig Rule and more.

### ***Calculating Oil and Gas Interests***

Even those who have been doing oil and gas calculations for years would agree that calculating interests can sometimes be confusing. This one-day workshop is not only fun and creative; it is also insightful and full of hands-on oil and gas issues that can be mastered. Each attendee will experience more than a math class; they will become involved in telling each of the interest owner’s stories with numbers. They will leave with a fuller understanding of the rules related to title conveyances, burdens, net revenue interests, overriding royalty interests, farmouts, payouts, and non-consenting interests.
